

ACCESSORIES

Core Lifter Case

OVERVIEW

The Core Lifter Case is made of high quality alloy steel tubing that is specially heat treated to increase strength, toughness and wear life.

The core lifter case is the third piece of the check valve system. Its tapered design forces the core lifter to tighten up on the sample as it pulls the core lifter downwards.

TECHNICAL SPECS

Features

	
Lateral Discharge	Frontal Discharge
Designed for Standard Waterways Bit . Recommended for general purpose coring operations.	Designed for Face Discharge Waterways Bit . Recommended for very soft and broken ground or swelling core applications with O "3" Barrels. The face discharge ports offer excellent flushing to prevent blockages in the water ways channels by reducing pressure to the ID and redirected fluid to the face of the Bit.
