

ACCESSORIES

LOCKING COUPLING WITH TANG

MININGPRODUCTS
DIAMANTINA CHRISTENSEN TECHNOLOGIES

OVERVIEW

The Locking Coupling are made out of high quality alloy steel with a Hard-faced Latch resisting area for better latching reliability.

The Tang is a tab of steel located on the pin end of the locking coupling. The tang acts as a physical stop against the core barrel head latches to ensure the core barrel head rotates with the rod string, eliminating latch wear against the locking coupling.

TECHNICAL SPECS

Overview

Welding surface

- Triple ring of precision ground carbide pads to minus reaming shell gauge for hole stabilization.
- Pads is high contains of chrome carbide resistance to abrasion wear and impacts.
- Can be used in all drilling conditions.

Hard-Faced Area

- Hard-Faced Area Latch resisting for better latching reliability
