OVERVIEW

The Outer tube Full Hole is made out of high quality alloy steel with a cold drawn process.

The Outer Tube Full Hole are suited for competent ground formations where hole accuracy is a top priority. The 4-flat designs keep the core barrel system tight to the hole while allowing plenty of cutting flow. Note that while hole deviation is minimized with this system, higher drilling pressures will be experienced.

Comes in 5 ft and 10 ft (1.5m and 3.0m) lengths but can be extended in excess of 20ft (6m). Withstands a great deal of stress as it transmits rotation and thrust to the bit. The landing ring is nested just inside of the box end while the pin end holds the inner tube stabilizer in place inside the reaming shell.

TECHNICAL SPECS

Raw Material

Raw Material

Cold drawn seamless tube ASTM A519
