CASING AND ROD CUTTER

When a string of drill rod or casing cannot be removed from the hole, it is sometimes necessary to "cut" the rod or casing to salvage at least a portion of the material. The Christensen Products Rod and Casing Cutter is designed to be lowered in to the hole and cut the rod or casing string at a specified point.

Operation is achieved by applying water pressure to the piston in the tool which extends the cutter jaws. The tool is then rotated for cutting.

Each cutter assembly is shipped complete with one jaw set.

CASING AND ROD CUTTER
